

Defect Report

Defect Details

Field	Value
Defect ID	BUG_001
Defect Title	Login page accepts invalid email format and proceeds to the password screen
Module	Login
Environment	Windows 11, Google Chrome (Latest Version), Staging Environment
Severity	High
Priority	High
Status	New
Reported By	Nithizh
Reported Date	27-Jun-2026

Description

The application accepts an invalid email format during the login process and navigates the user to the password page instead of displaying an email validation error. This allows users to continue the login flow using incorrectly formatted email addresses.

Preconditions

- User is on the Login page.
- Application is accessible.
- Internet connection is available.

Steps to Reproduce

1. Open the application.
2. Navigate to the Login page.
3. Enter an invalid email address (for example: `abc@`, `user@gmail`, or `test@.com`).
4. Click the **Continue** button.

Test Data

Field	Value
Email	abc@

Expected Result

The application should validate the email format and display an appropriate validation message such as **"Please enter a valid email address."** The user should remain on the Login page and should not be allowed to continue.

Actual Result

The application accepts the invalid email format and proceeds to the password page.

Frequency

100% (Occurs every time)

Reproducibility

Always

Impact

Users are allowed to proceed through the login workflow with an invalid email format, resulting in improper input validation and an inconsistent user experience.

Attachment

Screenshot of the issue (Attach while submitting if available).

Suggested Fix

Implement client-side and server-side email format validation using standard email validation rules before allowing the user to proceed to the password page.
